Why Purchase a Fire Sprinkler Tank?

Tricel Weston is a supplier of LPCB Approved sprinkler tanks that are trusted by commercial businesses, municipalities, and their insurers who rely on the availability of an emergency water supply to sprinkler systems in the event of a fire.

The LPS 1276 Issue 2.0 standard provides strict regulations that guide all fire sprinkler protection systems. These regulations stem from the increasing number of fires and the severe damage they cause.

For a sprinkler system to be truly effective, it must be designed, installed, and maintained correctly. According to the LPS 1048-1 scheme, specific requirements must be met for the approval of Sprinkler Contractors in the UK and Ireland. This ensures that installers are qualified to design, install, and maintain sprinkler systems that meet high installation standards.

Originally, sprinkler systems were developed to protect property and equipment. However, in recent years, their role has expanded to life safety. They now play a critical role in aiding personnel escape during emergencies. Additionally, sprinkler tanks are multifunctional, supporting fire detection systems, fire alarms, and fire suppression efforts.

- Firefighting tank for your building.
- Options and key features same as sectional.
- Capable of being filled directly from mains supply.
- External ladders and safety guardrail available.
- Base steels available.
- Suitable for wet/dry pipe system.
- Support fire detection systems, fire alarms and aid in fire suppression.
- Help save lives and protect your property.
